## Household Item Simple Machine Identification Activity

Today I want you to look at the household items scattered across the lab tables and determine which (if any) simple machines can be demonstrated with the item. Then record your observations in a data table. You must find all examples of ALL 6 simple machines, including the different types of levers. Feel free to be creative, some items may be able to be classified as MORE than one simple machine. ©

| Household Item | Simple Machine | Evidence and HOW it make our work easier |

Questions:

1. Did you use classify any of the items at 2 or more simple machines? If so, explain why.
2. Did you classify any of the items differently than other groups? Write down at least 2 of them and explain why they were classified as different simple machines.
